

Population and Social interactions

$$X_i(t) = \begin{cases} 1 & \text{if site } i \text{ occupied by } \text{🦆} \text{ at time } t \ (1 \leq i \leq N) \\ 0 & \text{if site } i \text{ occupied by } \text{🦆} \text{ at time } t \ (1 \leq i \leq N) \end{cases}$$

Population and Social interactions

$$X_i(t) = \begin{cases} 1 & \text{if site } i \text{ occupied by } \text{🦆} \text{ at time } t \ (1 \leq i \leq N) \\ 0 & \text{if site } i \text{ occupied by } \text{🦆} \text{ at time } t \ (1 \leq i \leq N) \end{cases}$$

We are interested in $\mathbb{E}[\bar{X}]$,
the expected (\mathbb{E}) proportion (\bar{X}) of altruists in the population.

Population and Social interactions

$$X_i(t) = \begin{cases} 1 & \text{if site } i \text{ occupied by } \text{🦆} \text{ at time } t \ (1 \leq i \leq N) \\ 0 & \text{if site } i \text{ occupied by } \text{🦆} \text{ at time } t \ (1 \leq i \leq N) \end{cases}$$

We are interested in $\mathbb{E}[\bar{X}]$,
the expected (\mathbb{E}) proportion (\bar{X}) of altruists in the population.

Social interactions affect fecundity

In a deme with k 🦆:

$$f_{\text{🦆}} = 1 + \omega \left(b \frac{k-1}{n-1} \text{🎁} - c \text{🪙} \right),$$

$$f_{\text{🦆}} = 1 + \omega \left(b \frac{k}{n-1} \right).$$
